Elevate Security | **CROWDSTRIKE**

Proactive Employee Risk Protection
Identify, Engage, and Automatically Protect Risky Employees

The Problem

Elevate Security analysis finds that 8% of an organization's users are responsible for 80% of their security incidents. These people are highly susceptible to phishing, malware, and social engineering attacks. Currently, there are no effective methods for identifying high-risk individuals and protecting them from potential cyber threats.

The Solution

Elevate Security integrates with the CrowdStrike Falcon platform to enhance organizational visibility of high-risk individuals and mitigate their cyber risks. By connecting with the Falcon platform, Elevate allows security teams to quickly assess risky employees and employ automated playbooks to adaptively respond to potential threats and thwart targeted user attacks.

Elevate and CrowdStrike enable security teams to make better security decisions and automate responses to better protect high-risk individuals.

Integration with the CrowdStrike Falcon platform enables rapid assessment of risky employees based on their actions, frequency they're targeted, and by whom they are targeted. Advanced data science models predict and quantify the vulnerabilities of each individual, facilitating a scalable, tailored approach to managing risk.

> "Implementing an all-in-one Workforce Risk Management solution from Elevate Security integrated with our existing CrowdStrike stack was one of the best decisions we've made. It has allowed us to stay ahead of potential issues and ensure the safety and wellbeing of our employees. Thanks to this solution, we can focus on our continued growth with confidence and peace of mind."

Visibility Into Workforce Risk

Elevate Security scores cyber risk at the employee level, allowing security teams to track overall organizational risk, and zero in on the most likely sources of the next security incident.

Smarter Identity & Access Management

Elevate Identity injects user risk data into authentication and access review workflows to enable conditional access to sensitive resources based on user risk profiles.

Human Risk Management & Awareness

Elevate uses personalized, near real-time feedback nudges to inform workers of poor behaviors along with tailored training assignments for security awareness.

CrowdStrike Falcon

Powered by cloud-scale AI, CrowdStrike Falcon continuously delivers real-time analytics

Elevate Security Platform

Elevate ingests CrowdStrike data to enrich user risk scoring and understanding of current hot spots

Other Data Integrations

Device Mgmt.	HR / Workforce Data
DLP	SIEM
EDR	Simulated Phishing
Email Security	Web Security
Identity Mgmt.	

Better Together

Elevate ingests rich security data from the Falcon platform and other security technologies to surface high-risk employees. By combining Falcon data with other sources, a comprehensive profile and history of behaviors and risk is built out for each user. Through built-in and customizable automation, Elevate allows security teams to provide employees with personalized scorecards and feedback, drive intelligent identity and access decisions, and dynamically enforce conditional access control policies.

Organizations using data from the CrowdStrike Falcon and Elevate Security platforms gain a deeper understanding of their present workforce risk along with the ability to implement appropriate responses, both for better protection of the individual and for modification of their risky behaviors.

BENEFITS

Continuous monitoring and reporting of employee risk helps you track patterns and progress against organizational goals.

Significantly reduce account takeover attacks and slash the amount of time an adversary can maintain persistence.

Gain increased security accountability across the organization while building a much stronger security culture.

About CrowdStrike

CrowdStrike® Inc. (NASDAQ: CRWD). The CrowdStrike Falcon® platform leverages cloud-scale AI and offers real-time protection and visibility across the enterprise, preventing attacks on endpoints on or off the network. Powered by the proprietary CrowdStrike Threat Graph®, CrowdStrike Falcon correlates over two trillion endpoint-related events per week in real-time, fueling one of the world's most advanced data platforms for security.
